## Summary of Changes

- General Changes
  - Non-admin user and elevated User Account Control (UAC) security issues resolved.
  - Fixed licensing issues where license would become deactivated.
- *About*
  - Updated SilvAssist Tree icon to point to *About* form so users can see the `machineID` easier to authorize. *About* form pops up automatically if license is not authorized.
  - *About* menu doesn't show entire `machineID`. Made the field larger to show the entire `machineID`.
- *Plot Loader*
  - Fixed error with *Plot Loader* launching when `F4PolyId` field did not exist in Plots layer.
  - Updating layer flags error fixed.
- *Plot Allocator*
  - Fixed issue where the numbering of the `plotID` was off by 1.
- Events Management
  - Add (Edit) events error - fixed issue where adding a new event without any stands selected threw an error.

## Document Conventions

The following typefaces are used throughout this guide:

- The 'Courier' typeface is used for objects and attributes, file names and command line code.
- *'Italics'* are used for emphasis and for major component names.
- This **bold** typeface is used to represent information you should type in at the keyboard.
